Mess Food

Students frequently report concerns regarding food quality, hygiene, inconsistent menus, insufficient portions, and cleanliness of dining areas. These complaints are usually sent through emails or messaging groups, making them difficult to monitor. Without proper documentation and follow-up, similar complaints continue to arise every semester.

Water and Utilities

Irregular water supply, poor drinking water quality, Wi-Fi outages, electrical failures, and malfunctioning common facilities disrupt students' daily lives. Since complaints are scattered across different communication channels, authorities often lack a complete picture of recurring problems, leading to repeated reporting of the same issues without long-term solutions.

Hostel Maintenance

Leaking pipelines, broken furniture, damaged electrical fixtures, faulty fans, blocked drainage systems, and washroom maintenance issues significantly affect hostel living conditions. Manual complaint handling makes it difficult to prioritize requests, monitor pending work, or verify whether an issue has actually been resolved.

Major Problems

Academic and Administrative Concerns

Students also experience delays related to faculty advisors, department offices, scholarships, examination processes, certificates, and approvals. Finding the appropriate authority itself can be confusing, and students often have to send multiple reminder emails or personally visit offices just to receive an update on their request.

Campus Infrastructure and Public Facilities

Students regularly encounter issues such as damaged roads, inadequate street lighting, overflowing dustbins, malfunctioning drinking water stations, poorly maintained sports facilities, and unhygienic common spaces. Since there is no centralized record of infrastructure-related complaints, maintenance becomes reactive rather than proactive, affecting the overall campus environment.

Medical and Student Welfare Services

Students occasionally face delays or difficulties with campus medical facilities, counseling appointments, ambulance services, accessibility support, and other student welfare services. With complaints handled through multiple communication channels, there is limited visibility into response times and resolution progress. The lack of systematic tracking makes it difficult for authorities to identify recurring service gaps and improve the quality of support for students.

SAMADHAN

SAMADHAN is more than just a complaint portal. It is a comprehensive grievance management ecosystem designed to bridge the communication gap between students and the administration. By replacing scattered emails and informal communication with a centralized digital workflow, the platform ensures that every complaint is acknowledged, automatically assigned to the appropriate authority, monitored through every stage of resolution, and supported by real-time notifications and analytics. This not only improves transparency and accountability but also enables the institute to identify recurring issues, optimize resource allocation, and enhance the overall campus experience.

1

Smart Routing

Students log in using their institute credentials and submit their complaint through an intuitive portal. They select the relevant category such as Hostel Maintenance, Mess Food, Water & Utilities, Academic Issues, or Infrastructure, provide a brief description, and can upload supporting images or documents if required.

Output: A unique Complaint ID is generated instantly

2

Intelligent Routing

Based on the selected category and hostel or department, SAMADHAN automatically forwards the complaint to the appropriate authority such as the Hall Warden, Mess Committee, Maintenance Section, Faculty Advisor, Department Office, or Estate Office. This eliminates manual forwarding and ensures complaints reach the correct person without delay.

Output: Complaint is assigned to the responsible authority.

3

Tracks and Automated Notifications

Students can monitor the progress of their complaint through a personalized dashboard.

Every status update is reflected immediately:

- Submitted
- Under Review
- Assigned
- In Progress
- Resolved
- Closed

Email notifications are automatically sent whenever the complaint status changes.

Output: Complete transparency throughout the resolution process.

4

Resolution and Feedback

Once the concerned authority resolves the issue, the complaint is marked as "Resolved."

Students receive a notification and can verify the resolution by providing feedback or rating their satisfaction. If the issue persists, they may reopen the complaint or request further action.

This creates accountability while helping authorities improve service quality.

Output: Verified complaint closure with student feedback.

Zero

complaints lost
in email threads

24/7

portal
access for
every
student

100%

complaints
tracked
end-to-end

*Beyond tracking,
SAMADHAN builds
institutional memory:*

- Recurring hostel or mess issues become visible patterns, not forgotten emails, enabling data-driven fixes.
- Students gain trust in campus governance through visible accountability, not vague reassurances.
- Administration gets a single dashboard to prioritise and measure resolution performance across departments.
